N-(2-Methoxyethyl)phthalimide

Yoke Leng Sim, Azhar Ariffin and Seik Weng Ng*

Department of Chemistry, University of Malaya, 50603 Kuala Lumpur, Malaysia

Correspondence e-mail: seikweng@um.edu.my

Received 30 April 2008; accepted 7 May 2008

Key indicators: single-crystal X-ray study; $T = 100$ K; mean $\sigma(\text{C}-\text{C}) = 0.002$ Å; R factor = 0.060; wR factor = 0.206; data-to-parameter ratio = 15.1.

The title molecule, $\text{C}_{11}\text{H}_{11}\text{NO}_3$, lies on a crystallographic mirror plane which bisects the plane of the phthalimide unit and contains the C and O atoms of the 2-methoxyethyl group.

Related literature

For medicinal properties of the title compound, see: Chapman *et al.* (1989); Hall *et al.* (1994). For a kinetic study of the reaction that yields the title compound, see: Khan (1994).

N-(2-Methoxyethyl)phthalimide

Y. L. Sim, A. Ariffin and S. W. Ng

Comment

The title compound was previously reported in a kinetic study (Khan, 1994). We intend to carry out studies on the medicinal properties of the compound; some such properties have been reported (Chapman *et al.*, 1989; Hall *et al.*, 1994). The molecule of *N*-(2-methoxyethyl)phthalimide lies on a mirror plane that relates one half of the phthalamido portion of the molecule to the other; the 2-methoxyethyl substituent lies on the mirror plane itself (Fig. 1).

Experimental

Phthalic anhydride (2.59 g, 17.5 mmol) and 2-methoxyethylamine (1.50 ml, 17.5 mmol) were dissolved in acetic acid (25 ml). The mixture was heated at 393–413 K for 4 h; the reaction was monitored by TLC. Water was added to precipitate the product, which was collected (80% yield.) Crystals were obtained upon recrystallization from water.

Refinement

Carbon-bound H-atoms were placed in calculated positions (C—H 0.95 to 0.99 Å) and were included in the refinement in the riding model approximation, with $U(\text{H})$ set to 1.2–1.5 $U(\text{C})$.

Figures

Fig. 1. Thermal ellipsoid plot (Barbour, 2001) of $\text{C}_{11}\text{H}_{11}\text{NO}_3$ at the 70% probability level. Hydrogen atoms are drawn as spheres of arbitrary radii. Symmetry transformation (i): $x, 1/2 - y, z$.
